PROFESSIONAL SUMMARY

Enthusiastic Data Scientist with hands-on experience building end-to-end ML pipelines using Python, Scikit-learn, and deep learning frameworks. Projects span **NLP**, **CNN Pretrained Models**, and predictive modeling — with multiple applications deployed to production. Passionate about solving real-world problems through data-driven approaches.

TECHNICAL SKILLS

Languages: Python, SQL

ML / DL: Scikit-learn, TensorFlow, Keras, FaceNet, MTCNN, NLTK, CountVectorizer, Cosine Similarity

Data Analysis: Pandas, NumPy, EDA, Data Wrangling, Feature Engineering, Statistical Analysis

Visualization: Matplotlib, Seaborn, Power BI

Backend / Deploy: Flask, Streamlit, Railway (CI/CD)

Databases: MySQL, PostgreSQL, SQLAlchemy ORM

Tools: Jupyter Notebook, VS Code, Google Colab, Git & GitHub, MySQL Workbench

PROJECTS

AI-Powered Face Recognition Attendance System Python · FaceNet · MTCNN · Flask · MySQL **(Training Basket Internship)**

- Developed during internship at Training Basket — built a real-time employee attendance system using FaceNet for 128-d face embeddings and MTCNN for face detection.
- Implemented an in-memory embedding store using NumPy arrays (RAM-based) for fast cosine similarity matching — no database required, with sub-second identity resolution
- Building a scalable solution integrating computer vision, MySQL database management, and reporting capabilities via **Flask**.

MovieFlix-Smart Movie Recommendation System | Python · NLP · Scikit-learn · Streamlit · TMDB API 2025

- Built a content-based recommender on 4800+ movies using **NLTK stemming** and **cosine similarity**, deployed on **Streamlit** with real-time TMDB poster integration.
- Engineered full ML pipeline — text preprocessing, **CountVectorizer** (5000 features), similarity matrix — serialized with **Pickle** for sub-2-second recommendations.
- Resolved real-world deployment challenges: API error fallbacks, deprecated parameter fixes, and 176MB model file management via **GitHub LFS**.

Loan Approval Predictor | Python · Scikit-learn · Flask · Logistic Regression

- Built a binary classification model using **Bagging Classifier** on a Kaggle lending dataset to predict loan approval outcomes.
- Performed end-to-end ML workflow: data cleaning, label encoding, feature scaling, model training, and evaluation (**accuracy, precision, recall**).
- Deployed as an interactive **Flask web app** allowing real-time loan eligibility prediction from user inputs.

NexVault — Cloud-Deployed Banking System | Python · Flask · MySQL · SQLAlchemy · Railway 2024–2025

- Built and deployed a production-grade banking application (deposits, withdrawals, transfers, statements) on **Railway** with **CI/CD**.
- Implemented secure authentication using **SHA-256 PIN hashing**, session-based access control, and **brute-force lockout** protection.
- Designed modular OOP architecture with **SQLAlchemy ORM** for relational data modeling and transaction integrity (overdraft checks, balance verification).

INTERNSHIP

Data Science Intern — Training Basket, Noida, Uttar Pradesh Dec 2025 – Present

- Built an AI-powered Face Recognition Attendance System using **FaceNet**, **MTCNN**, and **Flask** as the primary internship project — handling end-to-end development from embedding generation to live deployment.
- Implemented RAM-based face embedding storage using **NumPy** for real-time identity matching without a database dependency, achieving sub-second recognition.
- Worked on **data preprocessing**, **EDA**, and model evaluation tasks alongside the core computer vision project using **Python** and **Scikit-learn**.

EDUCATION

Bachelor of Computer Applications (BCA) 2022 – 2025

Gagan College of Management and Technology, Aligarh, Uttar Pradesh
